

AGENT 2 — DEMAND ENGINE

Paid Acquisition Agent

LinkedIn Ads + AI Creative Generation — Running 24/7

WHAT THIS AGENT DOES:

Fills your webinar pipeline with qualified leads, generates AI video ads automatically, and retargets every no-show — all on autopilot.

PREPARED FOR

Randy Wimmer

Government Contracting Academy / ISO Certification Group

AI-Generated

Zero design work

Fully Tracked

Every dollar measured

Self-Optimizing

Pauses losers automatically

WHAT IS AGENT 2?

Agent 2 is your traffic engine.

Agent 1 runs the webinar funnel perfectly — but it needs people flowing into it. Agent 2 runs LinkedIn Ads targeting the exact right people: small business owners who are registered federal contractors and need ISO certification to win more government contracts. It generates AI video creatives automatically, optimizes spend weekly, and retargets every no-show from Agent 1. No manual ad work. No design agency. No wasted budget.

WITHOUT AGENT 2	WITH AGENT 2
✗ Manually design every ad creative ✗ No idea which ad is working ✗ No-shows disappear forever ✗ Spend budget with no tracking ✗ Start from scratch every webinar	✓ AI generates video ads automatically ✓ Every dollar tracked to registrations ✓ No-shows get retargeted for next webinar ✓ Underperforming ads auto-paused ✓ New creatives live in 8 minutes

WHAT IT TARGETS

<\$15	<\$150	5	\$0
Cost Per Registrant	Cost Per Call Booking	AI Videos Per Cycle	Design Agency Cost

THE 5 PHASES OF AGENT 2

Agent 2 runs across 5 distinct phases — from initial setup to weekly self-optimization. Once built, only Phase 1 requires human involvement.

1 SETUP

One-time build by BrndGuru. LinkedIn Campaign Manager configured, audience targeting defined (GovCon founders, 1–50 employees, SAM.gov registered), GHL landing page built with Custom Values, LinkedIn Insight Tag pixel installed, VPS connections wired (Higgsfield + Claude + LinkedIn APIs).

2 PRE-WEBINAR

Triggered automatically when Randy creates a new Zoom webinar. n8n reads the topic, date, and time → updates the GHL landing page instantly → calls Claude AI to write video prompts → calls Higgsfield API to generate 5 B-roll clips → FFmpeg assembles the final video ad → uploads everything to LinkedIn. Takes ~8 minutes. Zero manual work.

3 ADS RUNNING

LinkedIn campaigns run with all creatives live. LinkedIn Insight Tag tracks every registration back to the exact ad. Every 7 days, n8n pulls performance data → auto-pauses creatives with CTR below 0.3% → shifts budget to winners → alerts BrndGuru if CPL exceeds \$20.

4 RETARGETING

Agent 1 tags no-shows → GHL webhook → n8n → adds emails to LinkedIn 'No-Show' audience → separate retargeting campaign fires. Website visitors who didn't register are captured by the Insight Tag pixel and shown ads automatically. Lookalike audience built from Randy's 300+ contacts in GHL.

5 REPORTING

Every Monday at 8AM, n8n pulls LinkedIn Ads API + GHL pipeline data → formats weekly report → pushes to Agent 6 dashboard → emails Randy and BrndGuru: registrations, CPL, calls booked, revenue attributed to LinkedIn. Full attribution from ad click to closed deal.

THE AI CREATIVE PIPELINE

Every webinar cycle, the system generates fresh LinkedIn ad creatives automatically — no design agency, no manual work. Here is the exact step-by-step flow:

1

ZOOM WEBHOOK

Randy creates a new Zoom Webinar → Zoom fires a webhook to n8n on the VPS instantly. Payload includes: webinar topic, date, time, and Zoom Webinar ID.

2

n8n ON VPS

n8n receives the webhook and orchestrates everything from here. It updates the GHL landing page via API (Custom Values), then calls Claude AI and Higgsfield in sequence.

3

CLAUDE AI

n8n sends the webinar topic to Claude API. Claude writes 5 tailored Higgsfield video prompts — each targeting a different creative angle (authority, pain point, social proof, urgency, curiosity).

4

HIGGSFIELD API

n8n sends all 5 prompts to Higgsfield API simultaneously. Model: Kling 3.0. Higgsfield renders 5 cinematic B-roll clips (8 seconds each). n8n polls every 30 seconds until all 5 are complete, then downloads them to the VPS.

5

FFmpeg (VPS)

FFmpeg (free, runs on VPS) assembles the final video ad: combines best B-roll clips, adds animated webinar title overlay, adds Randy's pre-recorded voiceover, adds captions and background music. Output: polished 60-sec LinkedIn video ad.

6

LINKEDIN ADS

n8n calls LinkedIn Marketing API: uploads the video creative, creates the ad campaign, applies the saved audience targeting (GovCon founders), sets the daily budget. Ads go live. Total time from Zoom webinar creation to ads live: ~8 minutes.

THE RETARGETING LOOP — AGENT 1 ↔ AGENT 2

No lead goes cold. Agent 1 feeds audience data back to Agent 2 automatically — every no-show, every website visitor, every past registrant gets re-circulated into the next webinar cycle.

The compounding effect. Every webinar builds a larger retargeting audience. By month 3, Randy has hundreds of warm leads who've seen his content, visited his page, or attended a previous webinar — and Agent 2 is showing them ads for the next one automatically. Cost per registration drops as audiences get warmer.

THE 6 PLATFORMS POWERING AGENT 2

LI	LinkedIn Campaign Manager The ad platform. Campaign creation, audience targeting, bidding, and creative management all happen here. LinkedIn Insight Tag pixel installs on GHL page to track every conversion.	■ Needs account setup Ad spend only
GHL	GoHighLevel Hosts the landing page with Custom Values. Receives all leads from LinkedIn into CRM. UTM parameters stored on every contact record for full attribution.	■ Already subscribed \$97/month
VPS	VPS + n8n The automation brain. n8n on the VPS orchestrates the entire pipeline: Zoom webhook → Claude → Higgsfield → FFmpeg → LinkedIn API. Runs 24/7 on the same server as Agent 1.	■ Already set up \$250 / 2 years
HIG	Higgsfield AI Generates cinematic B-roll video clips from text prompts. Called by n8n via API. Model: Kling 3.0. 5 clips per webinar cycle at ~6 credits each = 30 credits. Starter plan covers multiple cycles.	■■ API key needed \$15/month
CAI	Claude AI API Writes the Higgsfield video prompts and ad copy based on the webinar topic. Called by n8n. One call per webinar cycle generates all creative briefs automatically.	■■ API key needed ~\$1-2/cycle
FFM	FFmpeg (VPS) Free video editor that runs directly on the VPS. Combines Higgsfield clips, adds title overlays, Randy's voiceover, captions, and music. Outputs the final LinkedIn video ad. Zero cost.	■ Free, open-source \$0

RANDY — YOUR 4-ITEM CHECKLIST TO GO LIVE

01	Create a LinkedIn Campaign Manager account Go to linkedin.com/campaignmanager → connect to your LinkedIn profile → add billing card. BrndGuru handles everything else.	■
02	Set your first webinar ad budget Recommendation: start with \$200–\$300 for the first webinar to test creative. BrndGuru optimizes from there.	■

03

Record a 60-second voiceover (once)

Randy speaks: 'If you're a federal contractor trying to win more contracts...' — recorded on phone or Zoom. Used across all video ads.

04

Confirm Higgsfield + Claude API access

BrndGuru sets up both API keys on the VPS. Randy only needs to approve the monthly spend (~\$15–\$17/month total for both).

Once all 4 items are confirmed, BrndGuru builds Agent 2 alongside Agent 1. Target: both agents live and ads running within 14 business days.

AGENT 2 — FULL TECHNICAL WORKFLOW & TRIGGER MAP

Complete trigger map — every automation step, every API call, every tool. For implementation reference.

#	TRIGGER	TOOL	ACTION / OUTPUT	→ FIRES NEXT
T1	Zoom Webhook webinar.created	n8n (VPS)	Zoom fires POST webhook → n8n extracts topic, date, time, zoom_id → stores in workflow context	→ T2 and T3 fire in parallel
T2	n8n: landing page update	GoHighLevel	PATCH GHL /custom-values: webinar_topic, webinar_date, webinar_time, zoom_webinar_id Landing page updates instantly — same URL, new content	→ Agent 1 date triggers also updated
T3	n8n: creative generation start	Claude API	POST Claude API: 'Write 5 Higgsfield video prompts for webinar on [topic], audience: GovCon founders' → Returns 5 cinematic prompts with different angles	→ T4 (5 parallel calls)
T4	Claude output → 5 prompts ready	Higgsfield	POST /api/v1/generate/video × 5 (parallel) Model: kling-3.0 Duration: 8s Aspect: 16:9 Returns 5 job_ids	→ T5 (poll loop)
T5	Poll: video status check	Higgsfield	GET /api/v1/jobs/{job_id} every 30s until status='complete' Download all 5 .mp4 files → save to VPS /creatives/{date}/	→ T6 (FFmpeg)
T6	Videos on VPS ready	FFmpeg (VPS)	FFmpeg assembles: combine clips + title overlay + Randy voiceover + captions + music Exports final 60-sec ad-final.mp4	→ T7 (LinkedIn upload)
T7	Final video assembled	LinkedIn API	POST /v2/assets (video upload) → POST /v2/adCreatives (3 static + 1 video) POST /v2/adCampaigns → POST targeting facets → campaign live	→ Ads live (~8 min from Zoom webhook)
T8	Schedule: every 7 days	n8n Schedule	GET LinkedIn /adAnalytics → check CTR, CPL, impressions per creative IF CTR < 0.3% → PATCH creative status: PAUSED IF CPL > \$20 → alert BrndGuru via email	→ Data pushed to Agent 6 dashboard
T9	GHL Tag: 'no-show' (Agent 1)	n8n (VPS)	GHL webhook fires → n8n → LinkedIn API: POST /v2/dmpSegments (add email to No-Show audience) Retargeting campaign fires: replay + next webinar ads	→ LinkedIn shows retargeting ads
T10	GHL contacts > 300 (milestone)	n8n (VPS)	n8n exports GHL contact list (emails) → POST LinkedIn /v2/dmpSegments (Matched Audience) LinkedIn builds Lookalike Audience (2% similarity) automatically	→ New lookalike campaign created
T11	Schedule: Monday 8AM	n8n Schedule	Pull LinkedIn Ads API + GHL pipeline data → format weekly report Push to Agent 6 dashboard → email Randy + BrndGuru with CPL, registrations, calls, revenue	→ Agent 6 dashboard updated

■ T4–T6 (highlighted) are the Higgsfield AI creative generation nodes — the core innovation of Agent 2. These replace a design agency entirely.
